NETFLIX  reddit

Did you know that huge websites like Netflix and Reddit are hosted on AWS? What are you waiting for? Start your journey as AWS Cloud Computing Engineer today!

Start your AWS Cloud Engineering course to get deeper insights into the world of Cloud Computing

What is it all about?

Have you always wanted to explore the world of cloud computing in an AWS course, but lacked the necessary skills? In our first 12-months Cloud Computing Course, you'll learn **everything about the world of cloud computing and can graduate with up to 4 certificates.**

What awaits you?

You learn basics of AWS Cloud Computing and Linux and finish **with an AWS Cloud Practitioner exam.** Afterwards, you'll continue with **Development Operations (DevOps) to get a deeper understanding** of the core AWS services. Optionally, you will receive a **Linux certification** after passing an exam.

Almost done!

In the final section, you'll get down to business **and graduate with an AWS Solution Architect certificate.** Optionally, you can take the **Terraform certification exam** and earn another certification.

With up to 4 certificates, you are now fully equipped for your **leap onto the cloud** and your next career step.

Content overview

- Come into the world of **Cloud Computing**, get to know the benefits & learn how to work with AWS
- Get to know how to use **VCS Git** (version control system) for future products
- Learn how to understand cloud computing concepts
- Discover Linux and how to write **OOP programs (Object-oriented programming) with Python**
- Dive deeper into the world of Linux, Networking, Security, Python Programming & Databases
- Discover how to design **Resilient & High Performing Architectures**
- We will teach you how to implement operational excellence
- **Certifications: AWS Certified Cloud Practitioner, AWS Certified Solutions Architect & (optional) Linux Foundation Certified IT Associate & HashiCorp Certified Terraform Associate**
